Weekly Market Review
November 13, 2026

This Week At A Glance

EXTREME

Asparagus
All varieties limited throughout year-end

Avocados
Pricing & availability fluctuations thru November

Cauliflower
Supplies light, insect pressure on yields

Snow Peas
Guatemalan supply extremely limited

Tomatoes, Grape & Cherry
Both coasts in transition

ESCALATED

Boston / Butter
Quality good, improving

Cabbage, Green
Market rising, heavy insect pressure

Cabbage, Napa
Supplies tightening up

Cilantro
Quality varies

Green & Red Leaf
Quality fair, supplies limited

Lettuce, Iceberg
Trending down.

Limes
Relief due mid-November

Parsley, Italian
Supplies tightening

Romaine & Romaine Hearts
Improving with Yuma

Strawberries
Rain damage in CA

Tomatillo & Hot Pepper
Shortages in transition

Tomatoes, Rounds & Romas
Romas up, rounds easing

WATCHLIST

Blackberries
CA ending, organic light

Broccoli
Tight in CA

Celery
Demand up for holidays

French Beans
Guatemala still limited

Herbs
Chervil and Thai basil light

Mushrooms, Cremini
Green mold cutting volume

Pineapples
Size curve shifting

Potatoes
Russets up, reds down

Raspberries
Rain cutting shelf life

Small Citrus Sizes
Trending larger

Sweet Potatoes
Harvest nearly complete

Table Grapes
Season ending on domestic

PROMOTABLE

Blueberries
Excellent quality out of Peru

Carrots
Quality and supplies good

Fuyu Persimmons #2467
New crop out of California

Gala Apples #0116
Honeyscrisp #10580
New crop, good volume available

Green Onion

Navel Oranges
Season underway

Pomegranates #2474
New crop out of California

Zucchini& Yellow Squash
Ample supply

Value-Added Garden Cut
Fresh-cut produce - visit our new site:

Overview

Tomato supplies will continue to be a struggle for the next 2-3 weeks with occasional supply interruptions possible, particularly on Rounds and Grapes.

The **Lime** market remains firm across all sizes.

Hot Pepper production is expected to tighten up on several varieties with quality being mixed.

U.S. **Table Grape** availability will start to decline daily as the season comes to a close. Greens are currently the shortest. Offshore availability was limited this week but expected to improve by end of month.

Cremini Mushrooms are in short supply due to production declines and yield losses caused by green mold. In addition, costs are expected to rise across the domestic supply chain, particularly growing and operating costs.

Pineapple size curve will shift and may need to substitute sizing through the holiday.

Salinas production continues to be impacted by insect pressure, INSV, and Sclerotinia, but the Salinas season is coming to an end. Supplies on some commodities remain limited, but production in Huron and Yuma is beginning to alleviate the pressure on Salinas supplies. Quality issues will continue as disease and insect pressure remain, particularly in Leafy Greens and Cauliflower.

Cauliflower supplies remain extremely limited, and the market is at the extreme level. We are now in the middle of transition, and supply and quality challenges will continue until production settles into Yuma. We anticipate gradual improvement in pricing and quality as Yuma production becomes more established.

Avocado supply recovery remains slow as controlled harvesting schedules reduce weekly volumes by approximately 30% and delay inventory replenishment. Saturday training requirements and Mexico's Monday holiday will limit next week to four harvesting days, adding pressure to already limited supplies. Current availability is concentrated in 48- and 60-count fruit. Pricing remains elevated and is expected to stay firm for the next several weeks, with limited availability and potential prorations continuing as inventories gradually recover.

Strawberry supplies remain extremely limited as California production declines and Mexico and Florida slowly increase volume, with additional California rainfall threatening further reductions and continued prorations. Meaningful strawberry supply relief is not expected until the second or third week of December. **Blackberry** volumes remain relatively steady in Mexico, although organic availability is light and Watsonville production is winding down, with occasional softness and leaking reported. **Raspberry** supplies are steady this week, but rain-related quality concerns and reduced shelf life could tighten availability and support higher pricing. **Blueberry** volumes from Peru remain slightly below expectations with excellent quality, and supplies are expected to improve in December as Mexico and Chile increase production.

Citrus markets are projected to continue experiencing tight supplies of smaller sizes, as fruit generally trends larger. A warm, wet winter is anticipated, and suppliers will work to mitigate potential supply disruptions caused by rain-related harvest delays. Navels are in full swing and seedless lemons are available. Cara Cara Oranges are anticipated to begin in mid-to-late November.

Freight: Limited truck availability and record-high fuel costs are putting upward pressure on rates daily. We are seeing several freight companies, including ocean freight providers, implement fuel surcharges that will impact cost inputs.\

El Niño: While it's still too early to predict how severe the impacts of El Niño will be, we do know that impactful storms will likely hit the Central Coast. We will be adding updates as we receive them, but for now all indicators are pointing towards a strong El Niño taking shape over the next several months. Yuma is seeing increased precipitation, so growers are placing crops across various growing regions to try to mitigate supply issues. The growers do have plans in place and will be acting accordingly to try to minimize the effects of the weather event as much as they can.

CITRUS

Limes: ESCALATED Supply will get lighter, and markets are firming up as current regional product will decline. We will continue to see size issues with distribution will skew heavily toward 175s and 250s. Unfortunately, this is leaving larger sizes. Due to limited sizing on the larger end of the scale, we are still seeing a need to substitute with smaller sizes for the next several weeks. Overall quality will be a concern; external blemishes, oleocellosis and limited shelf life may occur.

Lemons: Small Lemons are tightening up. Some suppliers will not take new volume on smaller sizes until supplies improve.
Navels: In full swing with good suppliers.
Valencias: Done for the season.

BERRIES

Strawberries: ESCALATED Strawberry supplies continue to decline following the rain events across Santa Maria, Oxnard, Salinas, and Watsonville. Mexico was expected to ramp up more quickly to help offset these declines; however, several anticipated rain events could significantly reduce projected volumes and delay that relief. Quality concerns over the next several weeks may include reduced shelf life, bruising, softness, premature breakdown, misshapen fruit, and pale color. Supplies will be extremely tight moving into November and are expected to remain limited through December, with meaningful improvement dependent on weather conditions and production increases in Mexico and Florida.
Blackberries: WATCHLIST Blackberry volumes are somewhat steady in Mexico, with direct exports to Texas underway, although organic availability remains light. Watsonville production is winding down, and availability is limited. Quality is generally good across both regions, with some softness and leaking fruit reported.

Raspberries: WATCHLIST Raspberry supplies from Mexico remain on par this week, with exports already moving into Texas. Rainfall has had a slight impact on quality, which remains fair to good overall. Some reduction in shelf life may be experienced over the next few weeks as the industry works through rain-affected fruit. Expect tighter availability and potential upward pricing pressure until production stabilizes.
Blueberries: Peru remains the primary source over the next few weeks before production begins to wind down and supply transitions to Mexico. Peruvian volumes remain slightly below expectations, consistent with typical seasonal availability. Quality remains excellent across both conventional and organic offerings. Overall supplies are expected to improve in December as production from Mexico and Chile increases.

FRUITS & VEGETABLES

Avocados: EXTREME Avocado supply recovery remains slow as new harvesting controls limit the industry's ability to rebuild inventories following the shutdown. Under agreements between growers and Local Plant Health Boards, harvesting is being reduced approximately 30% from weekly levels, with several boards temporarily suspending operations today, tomorrow, and Monday. Saturdays are now designated for phytosanitary training, limiting regular harvesting to weekdays, while Mexico's national holiday on Monday will leave only four harvest days next week. With just three days of normal harvesting since operations resumed, inventories remain difficult to replenish. Pricing remains elevated and is expected to stay at higher levels for the next several weeks, with continued limited availability and potential prorations as supplies gradually recover. Current size curve is peaking on 48 and 60 counts.

Table Grapes: WATCHLIST Production is almost done out of California on storage fruit and will need to transition over to imports. Quality on the remaining domestic fruit will be marginal and will begin to see more shatter, dehydrated stems, discoloration, and possibly decay. We will begin to transition to 100 percent offshore this week on reds and expect to have greens next week. We should be 100 percent out of domestic grapes by end of month.

Bananas: Banana supply will be stable, but production curtailed due to virus pressure, low yields, and rising costs. Though quality is very good and current supply is adequate, consistency will be crucial. To navigate the coming year, ensure consistent supply, maintain regular ordering patterns, and proactively address any potential issues impacting the banana program. Bunker rates will be released this week and next, expect them to be higher due to rising fuel costs.

Pineapples: WATCHLIST Supplies have tightened up, and we have seen an increase in open market pricing. Contract volume is holding firm, but open market availability has dropped. Suppliers are expecting this to last for 2 to 4 weeks. This should not affect quality, which has been good overall but may impact sizing and the need to sub to different sizing over the next few weeks.

MELONS

Overview: Yuma will wrap up for the season this week and transition to offshore production early next week.

Cantaloupe: Production out of Guatemala is primarily 9's and 12's with limited jumbos available. Brix levels are lower ranging from 10-14 percent. External color is a tad greener than normal, but netting is good. We expect improving quality and condition over the coming 3-4 weeks.

Honeydew: Current production consists almost entirely of jumbo fruit. Since last week, sizing has peaked at 4Js and 5Js, leaving 6s and 8s in very limited supply. We are exploring alternative ways to meet demand for smaller fruit, including packing 6Js or sourcing honeydews to ship with cantaloupes. As is typical for Yuma, honeydews may show some external scarring but are of sound overall quality.

Watermelon: The market is starting to transition the late-season US crop from Texas to imports. Most imports will start coming from Mexico. Pricing is steady even with lower supplies as demand tapers off. Quality throughout the growing regions has been good.

WEST COAST LETTUCE

Iceberg: ESCALATED Lettuce quality is good and supplies are improving. We are still seeing some reports of small heads, lighter weights, internal burn, wind burn, and soil-related defects but quality is improving. Huron and Yuma are beginning to provide some relief. The lettuce market is now trending down.

Iceberg VA: ESCALATED Quality is good and supplies are improving.

Romaine VA: ESCALATED Quality and supplies are good. We are still seeing some core in the bags and some mildew but quality is improving with Yuma supplies.

Boston/Butter Lettuce: ESCALATED Quality is good, and supplies are improving.

Romaine & Romaine Hearts: ESCALATED Supplies and quality are good. There are still some reports of light weights, tip and fringe burn but quality and supplies are improving as we move into Yuma.

Green Leaf, Better Burger and Red Leaf: ESCALATED Quality is good and supplies are improving.

EASTERN AND WESTERN VEGETABLES

Green Bell Pepper: Supply is lighter out of California and South Georgia; markets are expected to firm up.
Color Bell Pepper: Supply is tightening this week as coastal California regions begin to wind down for the season, and we prepare for Transition to the desert. The Hothouse Pepper category has also turned the corner and firmed up.
Jicama: Good supply and good quality available.
Mini Sweet Pepper: Supply lighter this week and expected for the next several weeks. Quality is good.
Mixed Chili Pepper: ESCALATED Supplies are lighter this week on all varieties with local deals wrapping up and delays in the harvest schedule in some of the newer production regions. We expect to see potential prorates; quality issues and sizing will be mixed until we completely transition. Pricing per pound is expected to be much higher through Christmas.
Tomatillo: ESCALATED Very tight this week and supply is expected to be a challenge through Thanksgiving.
Pickles: Lighter supply is available out of Tennessee/North Carolina, with limited supply out of Mexico. Quality is good.
Eggplant: Improving supply out of Nogales and the desert in the west. Good supply available out of South Georgia. Overall quality is good.
English Cucumbers: Steady supply and softer markets are putting downward pressure on the spot market this week out of Mexico and Canada. Quality is good.
Slicer Cucumbers: Supplies crossing through Otay Mesa and McAllen are much improved with stable volume available. In the East, we are seeing good supply out of Tennessee and Michigan. Quality is good from all shipping points.
Green Beans: ESCALATED Round Type: Limited supply and high demand for the holidays will keep upward pressure on pricing out of South Georgia, Baja and Coachella. Overall quality is good.
French Beans: WATCHLIST French bean supplies from Mexico remain limited due to rainfall. Weather-related challenges are also limiting both conventional and organic supplies from Guatemala, where production and quality are expected to improve over the next few weeks.
Zucchini/Yellow Squash: Improving supply out of South Georgia and Mexico crossing in Nogales available this week. Quality is good.

MIXED VEGETABLES

Artichokes: Quality and supplies have improved.
Asparagus: EXTREME Asparagus supplies remain extremely limited, with industry volumes estimated at just 50% to 55% of normal at best. Weather continues to reduce Mexican production, while Southern Peru is nearing the end of its season. Northern Peru's production remains concentrated in smaller sizes, with larger sizes expected to remain particularly limited through year-end. Markets are extremely active, pricing continues to rise, and significant prorations are expected. No meaningful short-term improvement is expected, and current grower outlooks suggest substantial recovery may not occur until late in the third quarter of 2027. Mexico's Caborca season, is also expected to produce limited volumes.
Bok Choy: Quality is okay and supplies are limited.
Broccoli Florets/Broccoli Crowns: Quality is good, and supplies have improved. Reports of browning and pin rot continue. Given the heavy insect pressure, we will continue to monitor this item but Yuma supplies will help.
Broccolini and Sweet Baby Broccoli: Quality is good, but supplies are limited. Growers are holding to average order volumes, and we will continue to monitor this item due to ongoing heavy insect pressure.
Brussels Sprouts: Quality is good and supplies have improved but remain limited.
Carrots: (JUMBOS, MEDIUMS and CELLOS) Quality and supplies are good.
Cauliflower: EXTREME Supplies remain limited. Insect pressure has increased drastically and is affecting yields.
Celery: Quality and supplies are good but the market is rising. Supplies will get light as we get closer to the holidays and the market will escalate. Organic Celery remains at the extreme level.
Corn, Sweet: Lighter supply and higher demand for the holidays are pushing pricing higher loading at all locations. We do expect elevated pricing through the holidays. Quality is good out of all regions.
Fennel: Quality and supplies have improved.
Kale: Quality and supplies look good.
Leeks: Quality and supplies look okay.
Garlic: Quality remains good although supply is snug on this. Continue to purchase steadily as the year progresses.
Ginger: Supplies and market are steady.
Green Cabbage: ESCALATED Quality and supplies are improving. The market is trending down.
Green Onions: Quality and supplies have improved. The market is no longer escalated.
Mushrooms: WATCHLIST Extra volume is expected to decrease over the coming weeks as retail demand increases ahead of the holidays. Overall quality is good; however, green mold may affect production in northern growing regions. Cremini volumes have declined significantly. We are not currently experiencing problems with our grower partners but prorates may occur over the coming weeks.
Napa Cabbage: ESCALATED Quality is good, supplies light.
Parsley (Curly, Italian): ESCALATED Quality is good, but supplies are tightening up. Italian Parsley 60ct is escalated.
Rapini: Quality is good, but supply continues to be light. The market is strong and therefore the supplies will continue to be light.
Red Cabbage: Quality looks good, but supplies are light.
Spinach: Quality is good, but supplies are tightening up. October is expected to be a roller coaster for this item. Insect activity has increased and yields will be affected.
Spring Mix: Supplies are limited and quality is okay. All leafy greens are affected by disease pressure.
Snow Peas and Sugar Snaps: ESCALATED Guatemalan snow pea and sugar snap supplies remain extremely limited, with improvement expected in mid-November. Domestic availability is limited due to weather-related challenges and field transitions. Mexican production is expected to begin in mid-November, providing additional supply as volumes build.

HERBS

WATCHLIST Basil production, quality, and supply remain good across both regions. On the East Coast, all herbs, including imported chervil, are readily available. On the West Coast, most herbs have steady supplies and fair quality, although chervil, lemon thyme, and marjoram remain limited due to heat.

HERB	SUPPLY	QUALITY	COUNTRY OF ORIGIN
Arugula	Steady	Steady	USA
Basil	Steady	Steady	MEX
Opal Basil	Steady	Steady	USA
Thai Basil	Steady	Steady	USA/MEX
Bay Leaves	Steady	Steady	USA/COL
Chervil	Steady	Steady	USA
Chives	Limited	Steady	MEX
Cilantro	Limited	Steady	USA/MEX
Cilantro	Steady	Steady	Costa Rica
Dill	Steady	Steady	USA/MEX
Epazote	Steady	Steady	MEX
Lemongrass	Limited	Steady	USA
Marjoram	Steady	Steady	USA
Mint	Steady	Steady	USA
Oregano	Steady	Steady	USA/MEX
Italian Parsley	Steady	Steady	USA
Rosemary	Steady	Steady	USA
Sage	Steady	Steady	USA/MEX
Savory	Steady	Steady	USA
Sorrel	Steady	Steady	USA
Tarragon	Limited	Steady	MEX
Thyme	Steady	Steady	USA/MEX
Lavender	Steady	Steady	USA
Lemon Thyme	Steady	Steady	USA
Lime Leaves	Steady	Steady	USA

OTHER FRUIT:

Apples: New crop Gala apples are being harvested, and inventory is building up. Granny Smiths are limited as they finish up storage crop, new crop will start in 1 week. Red Delicious, Fuji and Gold Delicious all have very limited storage supplies left, and new crop will start in mid to late September. New crop Honeycrisp apples have started, and good volume is available.

Pears: D'Anjou availability is limited; volume from both domestic and imports have dried up. The market remains stable, with new crop Bartletts. Red D'Anjou Pears are moderately available in U.S. #1 35–55ct sizes and should remain in the market for another couple of weeks. Bosc Pears are currently gapping until their respective new crop harvests.

Persimmons: New crop FUYU and Hachiya available out of California.

Pomegranate: Good supply available; New Crop out of California.

Asian Pears: Lighter volume, good supply on larger sizes.

Cherries: Limited availability on offshore fruit this week.

Stone Fruit: Limited/ Done for the domestic season.

Papaya: Maradol are steady out of Mexico, while Solos and Hawaiians are tight.

Kiwi Fruit: Supplies are fair out of Chile; California Kiwi Berries available. Some Golden Kiwis are also available.

Mangoes: Steady supply out of Mexico and Brazil. Varieties: Tommy's, Kents, Palmer and Keitts.

Quince: Limited supply available this week.

Figs: Black Mission and Brown Turkey available out of California.

POTATOES:

WATCHLIST Growers have completed the potato harvest for the season and are shipping from the new crop as storage inventories are established. Reduced acreage, water limitations, and high nighttime temperatures have contributed to smaller sizing, leaving 40- through 70-count supplies extremely tight, with limited availability expected throughout the season. Smaller 80- through 120-count potatoes remain more readily available. Market pricing remains elevated and continues to strengthen on larger sizes.

ONIONS:

The transition to the NW, Washington, Oregon, and Idaho is mostly done. Most California suppliers are finished for the summer season. Overall, the market is still struggling to keep up with demand, elevating open market pricing. NW suppliers are reporting less volume on colossal and super colossal sizing due to extended periods of smoke from neighboring wildfires and heat.

SWEET POTATOES:

WATCHLIST The 2026-2027 sweet potato harvest is nearing completion, with increased acreage and favorable harvest conditions supporting a larger crop this year. Early-harvested product has completed the sweat process and is now available for shipment, with overall quality reported as good. Supplies are expected to remain steady throughout the season, with additional availability in larger sizes, particularly jumbos. Pricing is expected to remain stable for the foreseeable future.

TOMATOES:

Q4 Updates: Quarter 4 is upon us, and we need to remember this can be the most challenging time of year for the tomato supply chain with local and seasonal production winding down for the season. We will begin transitioning to Florida in the coming weeks as well as Mainland Mexico for the winter months; with a forecasted Super El Niño season expected we want to be prepared for any vulnerability to weather related pressure on supply. We will continue to monitor the weather in all growing regions as well as receive updates from our grower partners and provide that information to you as soon as possible.

MEXICO

Round Tomatoes: ESCALATED Supply will be tighter on all sizes this week, particularly the larger sized fruit. This scenario, combined with overall higher demand, will keep prices higher this week. Quality is outstanding on what is crossing this week.

Roma Tomatoes: ESCALATED Stable supply and quality available out of Jalisco and Baja. Demand is very good this week putting upward pressure on prices. The drive for this is high demand from the East and lower production numbers out of Baja.

Grape Medley, Grape and Cherry Tomatoes: EXTREME A combination of events between the east coast and west coast being shorter than expected, markets will be firm across the category out west with possibilities of supply interruptions. Quality on the product loading in the west is far better than the east on all varieties.

EAST COAST

Round Tomatoes: ESCALATED Volume is mixed this week, and demand continues to exceed supply. Quality also varies across regions. Georgia should see additional volume this week; however, it will not be enough to meet demand. We do not expect relief from Florida for another three weeks.

Roma Tomatoes: ESCALATED Supply will remain light in South Georgia this week and should begin improving next week, with additional volume anticipated the following week. Quality is fair at best due to weather-related pressure. As with round tomatoes, significant relief is not expected until Florida production ramps up.

Snacking, Grape Medley, Grape and Cherry Tomatoes: EXTREME Volumes of cherry, grape, and medley tomatoes are very light this week due to weather-related pressure in South Georgia. Supply interruptions may occur across the entire category in the East until Florida production begins. Quality is fair at best. We expect market volatility over the next two to three weeks.

DAIRY:

It's more of the same with NFDM/SMP prices stronger and butter prices weaker. Cheese and WMP are caught in the middle and were mostly firmer (except in the U.S.). NZ soil moisture has been drying out and the PGI is trending sharply lower. It shouldn't be too negative on milk production short-term, but it needs to be watched. Bird flu has shown up in dairy cows in Washington state and Indiana for the first time. It could knock 0.05% to 0.1% off U.S. milk production for about 3 months if it becomes widespread which shouldn't have much of an impact on prices. Maybe weaker milk production in NZ/EU could turn the butter market around, but right now it is looking very heavy while the slowing production should be supportive on SMP/NFDM.

PROTEIN:

Beef:

Boxed beef was firmer overall Tuesday, driven primarily by Select. Choice was nearly flat at $365.23, while Select gained $3.43 to $358.37, tightening the Choice-Select spread to just $6.86. Volume increased sharply to 140 loads from 81 Monday. Ribs provided the strongest primal support, up $4.86, while briskets fell $4.46 and chucks were down $1.97. Retail focus has pivoted to turkeys and all the fixings. Cattle futures have rallied strongly since last Friday's low for the year. Futures and cattle prices are expected to move higher from here through the end of the year. 540k is the expected harvest this week and cattle prices are called steady to higher.

Pork:

Pork was essentially steady Tuesday, but the primals were mixed. The cutout edged $0.15 higher to $72.43 despite volume declining to 283.61 loads. Picnics were the strongest part of the carcass, gaining $6.16, while bellies added $1.84. Ribs were the clear weak spot, dropping $9.35, with loins and butts also modestly lower and hams basically unchanged. Meanwhile, negotiated hog prices fell sharply. Bottom line, the cutout is holding together, but the underlying market remains mixed with cheaper cash hogs creating a softer fundamental tone

SHELL EGGS:

National FOB shell egg weighted average prices are higher for caged eggs and lightly tested for cage free, while not well tested for the balance of environments. The undertone is fully steady to higher. Retail demand is moderate to good. Current domestic loose egg movement is light. Export demand is moderate to fairly good. Offerings are generally moderate. Supplies are mixed, mostly moderate to at times light. Market activity is moderate to active. California weighted average delivered prices are lightly tested. The undertone is steady to instances firm. Retail demand is moderate. Loose egg demand is light and reported as needed only. Offerings are moderate to at times available for the larger sizes. Supplies are moderate. Market activity is slow to moderate.

Chicken:

WOGs are still rated at full steady. Floor stocks still remain tight, asking prices are on the higher end. Trade activity is moderate. Bone-in breasts and front halves market remain mixed. B/S breasts are uneventful. Tenders and wings demands are fair though supplies are adequate. Dark meat section is clearing well. The market is about steady.

Export market activity is moderate.

Turkey:

DOMESTIC MARKET HIGHLIGHTS
Frozen 8-16 lb. hens and 16-24 lb. toms steady to firm. Demand steady. Offerings light. Frozen commodity Grade A 8-16 lb. hens offered at 177-202 and 16-24 lb. toms at 180-200 cents FOB for current shipments.

The market on white meat and white trim is steady. Demand is light. Offerings of fresh white meat are steady to light. Frozen white meat and white trim offerings remain light. Cooked and deli demand light. Grade A consumer sized breasts, institutional sized breasts are steady. Tom drums, fullcut, and V-type wings are steady to weak with the balance of bulk parts mostly steady. Demand light to instances moderate. Offerings light. The thigh meat market is steady to weak. Demand light. Offerings very light to light. Defatted gizzards, hearts and livers steady to barely steady. Demand and offerings light. Tails steady. Demand and offerings light. Tom necks steady with demand light. Mechanically separated turkey (MST) market is steady. Demand is light for both fresh and frozen. Offerings light to moderate with fresh the most available. Trading slow.

EXPORT MARKET HIGHLIGHTS
Trading slow. Market steady. Demand light. Offerings light to moderate.
